

INVESTOR & ENTERPRISE BRIEF

mAI Society

The smart software platform for apartment societies and housing communities

One place for residents, security guards, and committee members to run daily society life — billing, gate entry, complaints, elections, green spaces, home interiors advice, and flat rent or sale listings — without buying expensive gate machines or sensors.

Works through phone apps and WhatsApp

No special hardware required at the gate

Each society gets its own private setup

Pay only for the modules you need

What mAI Society is — in plain words

Most apartment societies juggle many tools: a billing app, a WhatsApp group, paper visitor registers, Excel for accounts, and separate vendors for elections or parking. Information gets lost, money is hard to track, and residents feel ignored. mAI Society replaces that patchwork with one connected platform.

THE PROBLEM

Society work is scattered across chats, notebooks, and old software. Gates are slow. Accounts are unclear. Committees struggle to prove decisions were fair. Buying sensors and kiosks makes costs worse without fixing the basics.

OUR SOLUTION

A single society workspace for residents, guards, and office-bearers. People use a mobile/web app and WhatsApp. The platform handles bills, visitors, staff entry, complaints, elections, gardens, home setup help, and flat listings.

OUR VISION

Every housing community can run safer gates, cleaner finances, fairer elections, and greener campuses — using software that feels simple, private, and modern.

OUR MISSION

Help Indian RWAs and society managers digitise operations without expensive gadgets, confusing jargon, or locked-in hardware contracts.

VALUE IN ONE LINE

Start with core society ops. Add smart modules when ready. No hardware purchase required.

Why society management still feels broken

Housing software often stops at “pay maintenance” and “post a notice.” Real daily life — maids at the gate, Amazon deliveries, noisy disputes, unclear expenses, and empty parks — stays manual.

COSTLY GADGETS

Many products push cameras, sensors, or kiosks. Societies pay for devices, AMC, and downtime — before they get good process.

WEAK DAY-TO-DAY CONTROL

Visitor books get forged or lost. Staff entry is verbal. Parents do not know when a child left the gate.

MONEY THAT IS HARD TO TRUST

Expenses sit in spreadsheets. Unusual bills are spotted late. Residents ask “where did the money go?”

GOVERNANCE BY CHAT GROUP

Elections, bylaws, and decisions live in WhatsApp forwards. That is not fair, searchable, or auditable.

NO HELP FOR LIVING SPACES

Societies manage gardens and homes on paper — or not at all. Compost, trees, and interiors stay outside the app.

TOOLS THAT DO NOT TALK

Gate, billing, complaints, and listings sit in different systems. Staff re-type the same flat number everywhere.

Not a feature race — a different foundation

Older society apps were built mainly to collect dues. New needs (smart gates, WhatsApp help, plant care, flat resale) get bolted on later. mAI Society was designed as a full community operating system from day one.

TOPIC	TYPICAL OLDER TOOLS	MAI SOCIETY
Hardware	Often needs devices at the gate	Phone + WhatsApp first — no gadgets required
Focus	Mostly billing and notices	Gate, money, elections, green, home, listings
Buying model	One big package	Core plan + optional modules per society
Resident channel	App only, or SMS	App plus WhatsApp for everyday questions
Trust	Manual letters and files	Clear records, dues status, and fair digital voting
Growth	Hard upgrades	Turn modules on when the society is ready

Everyone works in the same society picture

Think of mAI Society as the shared “control room” for your community. Different people see what they need — but the information stays consistent.

RESIDENT APP

Flat owners and tenants pay dues, approve visitors, raise complaints, book amenities, join carpools, check gardens, get room-setup advice, and list a flat for rent or sale.

GUARD / GATE APP

Security staff see approved visitors, staff QR passes, delivery clearances, kid exit rules, and emergency alerts — so the gate moves faster without calling every flat.

ADMIN / COMMITTEE PORTAL

Secretary and president publish notices, track complaints, verify tenants, review money health, manage amenities, and turn licensed modules on for the society.

WHATSAPP ASSISTANT

Residents ask common questions (“What is my due?”, “What is the pet rule?”) in WhatsApp. The assistant answers from society data and the rulebook — without waking the office at night.

BEHIND THE SCENES

Smart helpers watch patterns (money leaks, plant stress, room sizing), send alerts, and keep activity history. Everything stays private to each society’s own workspace.

Safer entry without buying gate machines

Guards get clear instructions on their phone. Residents approve people in advance. The society keeps a clean record of who came, for which flat, and when they left.

Delivery pre-approval

How it works: A resident marks that Swiggy, Zomato, Amazon, India Post, or a local courier is expected. The guard sees a green clearance and lets the person in without calling the flat.

Why it helps: Fewer interrupted evenings and faster gate queues.

Visitor & staff QR passes

How it works: Guests are approved digitally. Daily help (maid, driver, cleaner) get a QR pass that only works in allowed time windows. Exit can be logged so the visit is closed properly.

Why it helps: No more open-ended verbal 'she always comes' entries.

Kid safety at the gate

How it works: Parents set when a child may leave. If a minor tries to exit without approval, the guard gets a strong alert and parents are notified.

Why it helps: Extra protection without installing special child-tracking hardware.

Tenant onboarding

How it works: Owners upload the lease. The committee reviews and digitally signs off. The tenant gets access and the society keeps police-ready records.

Why it helps: Cleaner tenant paperwork and fewer disputes about who lives where.

Emergency SOS

How it works: A resident taps SOS for medical or security help. Guards and nearby volunteers see the flat location and can call back instantly.

Why it helps: Faster response when every minute matters.

Fair decisions residents can trust

Good societies need clear rules, clean elections, and answers that do not depend on one person’s memory.

Digital elections

How it works: Each flat gets one vote. Ballots stay private. Turnout can be shown without revealing who voted for whom. Results publish when voting ends.

Why it helps: Less booth drama, more confidence in the outcome.

Committee recall votes

How it works: If residents lose confidence in an office-bearer, they can start a formal recall motion. Votes are counted securely, flat by flat.

Why it helps: Accountability without chaotic WhatsApp campaigns.

Digital rulebook

How it works: Society bylaws and house rules live in the platform. Residents search them in the app or ask on WhatsApp.

Why it helps: Fewer arguments about ‘what the rule actually says’.

WhatsApp help for common questions

How it works: Residents message the society WhatsApp line for dues, notices, and rule lookups. Routine answers go out automatically; hard cases go to humans.

Why it helps: The secretary sleeps. Residents still get quick replies.

See problems before the yearly audit panic

Residents want transparency. Committees want early warnings. mAI Society watches payment patterns and unusual expenses, then explains them in simple language.

Society health score

How it works: Collections, complaint speed, and utility payment habits combine into an easy 0–100 health view.

Why it helps: Committees spot trouble early, not after AGM fights.

Unusual expense alerts

How it works: The system flags odd spikes in water, electricity, vendor invoices, or repairs and suggests what to check.

Why it helps: Leakage and mistakes surface while they are still small.

Vendor service scores

How it works: Residents rate housekeeping or security daily. Scores roll into a monthly performance view for the committee.

Why it helps: Renewals are based on evidence, not vibes.

Utility pattern insights

How it works: Water and power trends are summarised so managers can ask better questions of operators and tanks.

Why it helps: Less guessing when bills jump.

Clear flat billing

How it works: Each flat sees dues, receipts, and history. Pricing can follow society size tiers.

Why it helps: Fewer ‘I already paid’ arguments.

Audit-ready history

How it works: Important money and approval actions leave a trail the committee can export and review.

Why it helps: Auditors and residents get the same story.

Help neighbours help each other

In-society carpool

How it works: Residents post spare seats to offices or schools. Only verified flats in the same society can request a ride.

Why it helps: Cheaper commute and fewer stranger risks — with no commission cut.

Find lost phones, keys, or vehicles

How it works: A resident marks an item lost. Nearby neighbour phones in the society can report a last-seen hint on a simple map.

Why it helps: Community help without buying trackers for every object.

Smart visitor parking

How it works: When a flat is out of station, their bay can temporarily become a visitor slot — managed in software, not sensors.

Why it helps: Less parking chaos on festival days.

Amenities & neighbour exchange

How it works: Book clubhouse or courts with conflict checks. Sell or share items inside the society marketplace.

Why it helps: Facilities stay fair; clutter stays local.

Family & vehicle alerts

How it works: Parents or carers can get alerts if a child/senior leaves a safe zone pattern, or if a parked vehicle moves unexpectedly.

Why it helps: Peace of mind using the phones people already carry.

Gardens you can actually manage

Landscape teams often work from memory. Residents never see impact. mAI Botanist turns trees and compost into simple digital records.

Plant health helper

How it works: Upload a plant photo or describe yellow leaves / pests. The helper suggests care steps and can create a gardener task.

Why it helps: Sick plants get attention before they die.

QR-tagged trees

How it works: Each important tree gets a code. Scan it to see species, location, health, and estimated environmental benefit.

Why it helps: Residents connect with the campus they walk through every day.

Adopt a tree

How it works: A flat sponsors a society tree. The adoption shows on the plant record.

Why it helps: Shared pride and easier fundraising for landscaping.

Compost to your door

How it works: The society publishes compost batches. Residents order kilos for balcony gardens. Admins mark delivery done.

Why it helps: Organic waste becomes a resident benefit, not a smell complaint.

Plant swap

How it works: Neighbours list cuttings, pots, or seeds. Another flat claims them inside the society.

Why it helps: Greener balconies without nursery markups.

Buy the right TV and sofa the first time

Wrong screen size and cramped sofas waste money. mAI Space gives practical room advice before the shopping trip — then connects residents to trusted local designers if they want help.

SIMPLE TV SIZE RULE

Measure how far you sit from the wall (in feet). The helper converts that into a recommended TV size such as 43", 55", or 65" — the sizes stores actually sell.

Screen & sound advice

How it works: Enter room type and viewing distance (optionally upload a photo). Get TV size plus whether a soundbar is enough or surround speakers will block walkways.

Why it helps: Clearer movies without overwhelming a small living room.

Sofa & walkway planning

How it works: Guidance prefers L-shaped or 3-seater layouts and reminds you to leave walking space to the balcony or kitchen.

Why it helps: Furniture that fits the flat, not just the showroom.

Lighting mood tips

How it works: Suggests warmer evening light behind the TV and softer bedroom lighting to reduce glare.

Why it helps: Comfortable rooms without hiring a designer on day one.

Trusted interior partners

How it works: Residents send a one-tap request to society-approved interior, carpentry, electronics, or lighting partners with budget range and notes.

Why it helps: Help arrives from known vendors — not random marketplace spam.

List once. Reach renters and buyers faster.

Owners usually re-type the same flat details on many property websites and still pay brokerage. mailist lets a resident choose Rent or Sell, fill details once, and publish across major portals plus the society's own board.

- 1 Open My Flat → choose “Rent out” or “Sell”.
- 2 Add rent or expected sale price, parking, area, and documents if selling.
- 3 For sale, the listing can show a Verified Society badge when dues are clear and NOC status is recorded.
- 4 One-click publish prepares the listing for MagicBricks, 99acres, Housing.com, and NoBroker (rent or resale feeds).
- 5 An alert can go to interested society investors and verified buyer networks.
- 6 Buyers/renters browse the marketplace, estimate loan EMI for sale flats, and contact the owner directly — zero brokerage inside the society board.

FOR RENT

Monthly rent, deposit, furnishing, and move-in date — shared to rental portal formats.

FOR SALE

Total price, price per sq.ft (auto from carpet/super area), ownership type, negotiable flag, and title upload.

Built like modern enterprise software — explained simply

You do not need to know our internal tools. Here is what matters for societies and investors.

Apps people already understand

How it works: Web and mobile experiences for residents, guards, and admins — plus WhatsApp for quick questions.

Why it helps: Reliable operations without training residents on technical jargon.

Private per society

How it works: Each society's data stays in its own secure workspace. People only see what their role allows.

Why it helps: Reliable operations without training residents on technical jargon.

Secure sign-in

How it works: Accounts, roles (resident, guard, secretary, president), and optional module licenses.

Why it helps: Reliable operations without training residents on technical jargon.

Alerts that reach people

How it works: In-app alerts, push notifications, and WhatsApp messages for the moments that matter.

Why it helps: Reliable operations without training residents on technical jargon.

Smart helpers

How it works: Money anomaly checks, plant advice, room sizing, and mediation drafts — written for humans, not engineers.

Why it helps: Reliable operations without training residents on technical jargon.

Modular growth

How it works: Turn on elections, WhatsApp bot, green tools, interiors, or listings when the society wants them.

Why it helps: Reliable operations without training residents on technical jargon.

Recurring revenue aligned with society value

- 1 Platform subscription: one-time activation plus monthly per-flat fees based on society size.
- 2 Optional AI / enterprise modules: WhatsApp assistant, elections, auditor, green, interiors, mailList, and more.
- 3 Network services over time: interior partner leads and property listing distribution.
- 4 Future adjacency: society-friendly financial and insurance products when the trust layer is strong.

Where mAI Society stands out

Many tools are excellent at one job (billing or visitors). We compete on breadth with clarity: one society picture, optional intelligence modules, and no forced hardware.

QUESTION	SINGLE-PURPOSE TOOLS	MAI SOCIETY
Can one system cover gate + money + elections?	Usually no	Yes, in one workspace
Do we need gadgets to start?	Often yes	No — phones are enough
Can we add advanced help later?	Hard upgrades	Switch modules on per society
Do residents get WhatsApp answers?	Rare / bolt-on	Built as a first-class channel
Is trust visible (votes, dues, badges)?	Mostly paperwork	Designed into the product

From one society to many community types

The same product model — private society workspace, role-based apps, modular licenses — extends beyond a single apartment complex.

- 1 Housing societies (today's core)
- 2 Large townships and multi-tower portfolios
- 3 Builder-managed communities during handover
- 4 HOA-style associations
- 5 Corporate residential campuses
- 6 Retirement communities
- 7 Government housing programs over time

Expansion does not mean rebuilding the product. It means onboarding a new community onto the same proven operating model.

Six promises we keep repeating — because they matter

NO FORCED HARDWARE

Start with phones and process. Add devices later only if you want.

INTELLIGENCE THAT HELPS HUMANS

Alerts and suggestions are written for secretaries and residents, not engineers.

TRANSPARENT BY DEFAULT

Votes, dues, and approvals leave a clear trail.

MODULAR BUYING

Pay for elections, WhatsApp, green, interiors, or listings only when needed.

READY TO SCALE

One society or a portfolio — same structure.

FUTURE READY

Property exchange, green ops, and home services sit on the same trust layer.
